### Micro Skin Needling

Medical skin needling uses multiple surgical needles which creates multiple pin-point puncture wounds in the skin, extending into the middle dermal layers of the skin. Dermal damage breaks down scaring collagen and in return releases growth factors. This causes 'neogenesis' - the formation of new collagen and elastin. This treatment will also assist in the reduction of fine lines and large pores.

## Treatments We Offer

### Hair Loss

USING MICRO SKIN NEEDLING WITH PRP IS THE MOST COMPREHENSIVE HAIR LOSS TREATMENT AVAILABLE IN OUR PROGRAM. IT IS MORE EFFECTIVE IN ARRESTING BALDNESS AND RE-GROWING HAIR NATURALLY

### Photodynamic Therapy

Photodynamic Therapy (PDT) uses a cream and light source to make the cancer sensitive to light. It is used to treat sunspots, superficial BCCs and squamous cell carcinoma in situ (Bowen's disease). First the area is gently scraped with a curette to remove any dry skin or crusting. Then the light-sensitive cream is applied. After three hours a special light is shined onto the area. For skin cancers, PDT is usually repeated after a week. Extract from the Cancer Council.
